

Repository Register

Authoritative Locations and Backup Status

Version 1.0 · July 2026

01 — REPOSITORY HIERARCHY

LifeBook maintains a single source of truth for each category of asset. The table below defines the canonical folder hierarchy within Google Drive (tdeslaurier@gmail.com). OneDrive mirrors this structure as a backup; it is not an independent editing source.

Folder	Contents
LifeBook	Root folder
01 Governance and Covenants	Identity Charter, Interviewer Covenant
02 Identity and Brand	Identity Standards, all SVG and PNG mark assets
03 Customer Discovery	Customer Discovery Operations Manual
04 Product	Product specifications, roadmap, wireframes
05 Technology and Architecture	Architecture diagrams, infrastructure decisions
06 Financial Stewardship	Budgets, financial models, projections
07 Research and Evidence	Discovery research, evidence files, participant data
08 Legal and Corporate	Incorporation, agreements, IP filings
09 Approved Deliverables	Final published versions for distribution
99 Archive	Superseded versions, deprecated assets

02 — REPOSITORY REGISTER

The register below documents every authoritative repository, its purpose, current version or state, when it was last updated, and where a backup copy is maintained. Entries marked [PENDING] require Tracy or Discovery Partner to complete.

Resource	Authoritative Location	Purpose	Version	Last Updated	Backup Location
Identity Charter	Google Drive → 01 Governance and Covenants	Foundational covenant governing the LifeBook identity system	v1.0	July 2026	OneDrive → 01 Governance and Covenants
Interviewer Covenant	Google Drive → 01 Governance and Covenants	Ethical covenant for Discovery Partners conducting interviews	v1.0	July 2026	OneDrive → 01 Governance and Covenants

Resource	Authoritative Location	Purpose	Version	Last Updated	Backup Location
Identity Standards	Google Drive → 02 Identity and Brand	Technical and visual specification for all mark treatments	v1.0	July 2026	OneDrive → 02 Identity and Brand
SVG Mark Assets (16 files)	Google Drive → 02 Identity and Brand	Vector source files for Steward's Mark, Stewardship Mark, and lockups in all approved treatments	—	July 2026	OneDrive → 02 Identity and Brand
PNG Mark Assets (15 files)	Google Drive → 02 Identity and Brand	Rasterised 1× and 2× PNGs for document embedding	—	July 2026	OneDrive → 02 Identity and Brand
Customer Discovery Operations Manual	Google Drive → 03 Customer Discovery	Operational guide for conducting LifeBook customer discovery interviews	v1.0	July 2026	OneDrive → 03 Customer Discovery
Repository Register (this document)	Google Drive → 01 Governance and Covenants	Authoritative index of all LifeBook repositories and storage locations	v1.0	July 2026	OneDrive → 01 Governance and Covenants
Application Source Code	GitHub [PENDING — URL required]	All source code, prompts, migrations, config, tests, and deployment manifests	[PENDING]	[PENDING]	Local development environment
Conversation Prompts	GitHub → [PENDING — path required]	Prompts governing the LifeBook conversation experience (Threshold, Conversation, Memory)	[PENDING]	[PENDING]	Google Drive → 05 Technology and Architecture
Runtime Backend	Supabase [PENDING — project URL required]	Auth, database, storage, and edge functions for the LifeBook application	[PENDING]	[PENDING]	Supabase automated backups
Production Application	Vercel [PENDING — project URL required]	Deployed LifeBook application accessible to participants	[PENDING]	[PENDING]	Vercel automated deployment history
Local Claude Sessions	Temporary only — not durable storage	Working files used during active Claude Cowork sessions. No important file should exist here only.	—	Active session	Google Drive once complete

03 — BACKUP PROTOCOL

Google Drive (tdeslaurier@gmail.com) is the canonical document repository. All completed documents and assets must be uploaded there before a Claude session ends. OneDrive serves as a mirrored backup and should not be used as an independent editing source. GitHub is the canonical source for all application code; Supabase and Vercel maintain their own automated backup and deployment history.

Files that exist only in a local Claude session are at risk of loss. The protocol is: finish → upload to Google Drive → confirm → session may end.
